Installation guide

Enable the native magento review module

This module has dependencies on the native magento review module. It is important to check if this module is enabled. By default this module is enabled. To make sure it's enabled check the following two steps:

1. Make sure the default magento reviews are enabled with the cli command: `php bin/magento module:enable Magento_Review`
2. Enable product reviews in Admin sidebar, go to Stores > Settings > Configuration. In the left panel, expand Catalog and select Catalog underneath. Expand selector Product Reviews section. Set Enabled to Yes.

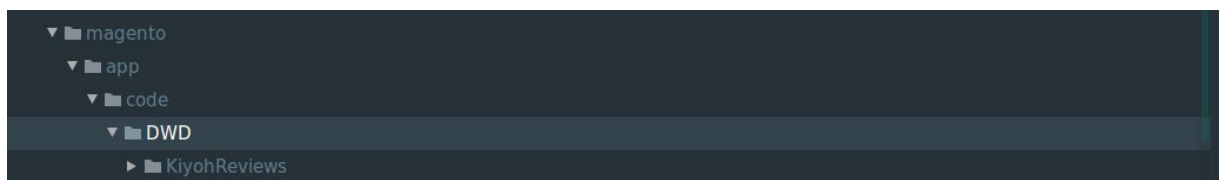

Install our module

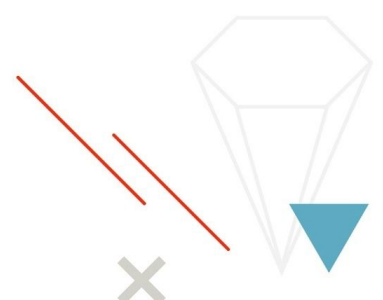

The magento module can be downloaded through github :

<https://github.com/dutchwebdesign/magento2-kiyoh>

3. Add the module in `app/code/DWD` directory of your magento2 installation.

4. Run: `php bin/magento module:enable DWD_KiyohReviews`
5. Run: `php bin/magento setup:upgrade`
6. Run: `php bin/magento setup:di:compile`
7. If in production modus you need to compile the static files again with:
`php bin/magento setup:static-content:deploy`

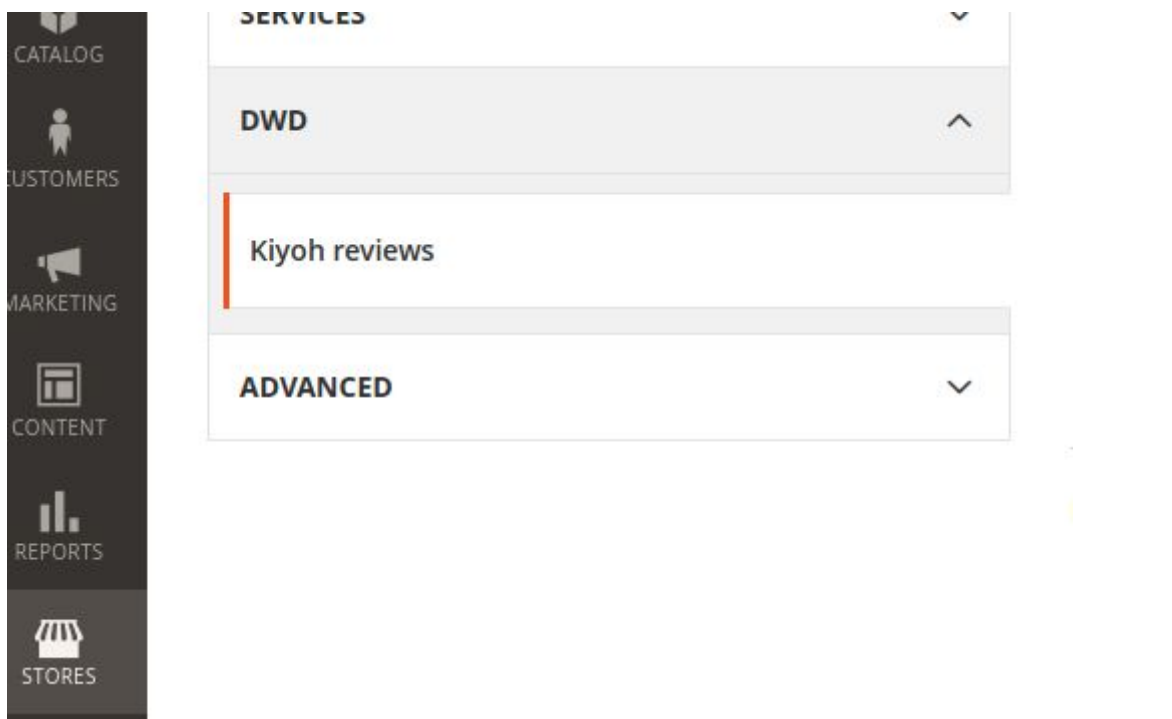

User guide

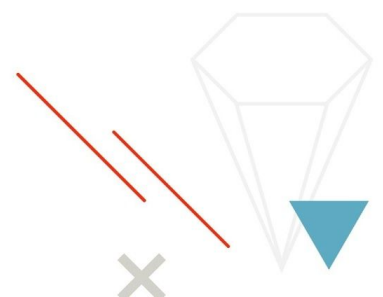

The module can be divided in two segments: company reviews and product reviews. Both require a subscription to Kiyoh <https://kiyoh.com/>

Main configuration

Go to the configuration of kiyoh product reviews in Admin sidebar, go to Stores > Settings > Configuration. On the left panel open DWD > Kiyoh reviews.

Api key: Can be found in your kiyoh account > Invite > Extra options

Location id [global]

Location id: Can be found in your kiyoh account > Invite > Extra options

Server [global]

Server: It can be on kiyoh.com or klantenvertellen.nl. They have no difference yet and can be set on both.

Select Event [global]

Enter here the event after which you would like to send review invite email to your customer. Complete triggers when the order has the status complete (after shipping), Processing triggers after the order has been invoiced

Select event: The event triggers the send kiyoh review mail to the customer. Complete event triggers when the order is completed (after you press shipping inside the order). Processing event triggers after the order has the status processing (after you press invoice inside the order).

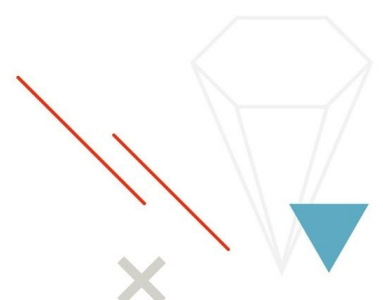

Email language [store view]

Language of the review email

Email language: The language of the kiyoh review email. This can be set on store level

Review by vince

Enable:
[global]

Yes

This will send company and product review combined after the chosen event

Enable: This will enable kiyoh product reviews in front-end and will send the combined company & product review email. The emails are sended based on the chosen event.

Max products in review [global] ▼

Max products in review: This will give a max value to the number of products to review inside the kiyoh review mail.

Enable Product Sync Cron [global] ▼

Activate cron only on live environment. This will sync all products to kiyoh

Enable Product sync cron: Automatically sync all your products (except configurable child products) to Kiyoh

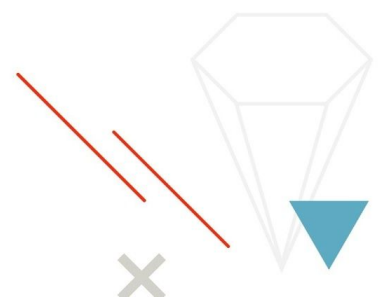

Frequency [global] ▼

Start Time [global] ▼ : ▼ : ▼

Frequency: Specify a time for the cronjob.

[manual product sync](#)

Manual product sync: If you do not want to wait on the cronjob you can trigger the product sync manually.

For developers

This module has the following console commands:

```
dwd
dwd:kiyoh:invite          send kiyoh review to corresponding order
dwd:kiyoh:send-products  give ID (int) or ALL also possible to log only data and not send
```

```
magento dwd:kiyoh:invite --orderid 000008 --testmode true
```

This will give detailed information about the post data to kiyoh. Notice `--testmode false` will send the review again.

```
magento dwd:kiyoh:send-products --productid ALL --log true
```

This will give detailed information about the post data to kiyoh. Notice `--testmode false` will sync the products to kiyoh.
